Relocating the database in the Scheduler Service

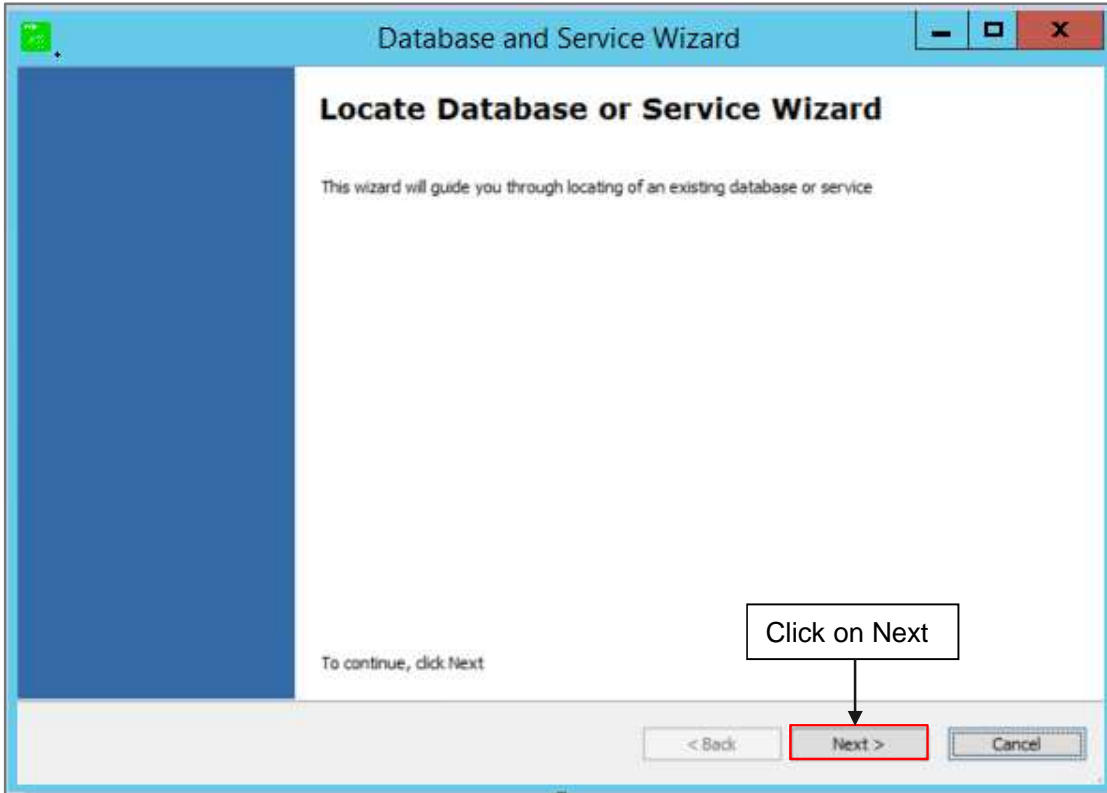

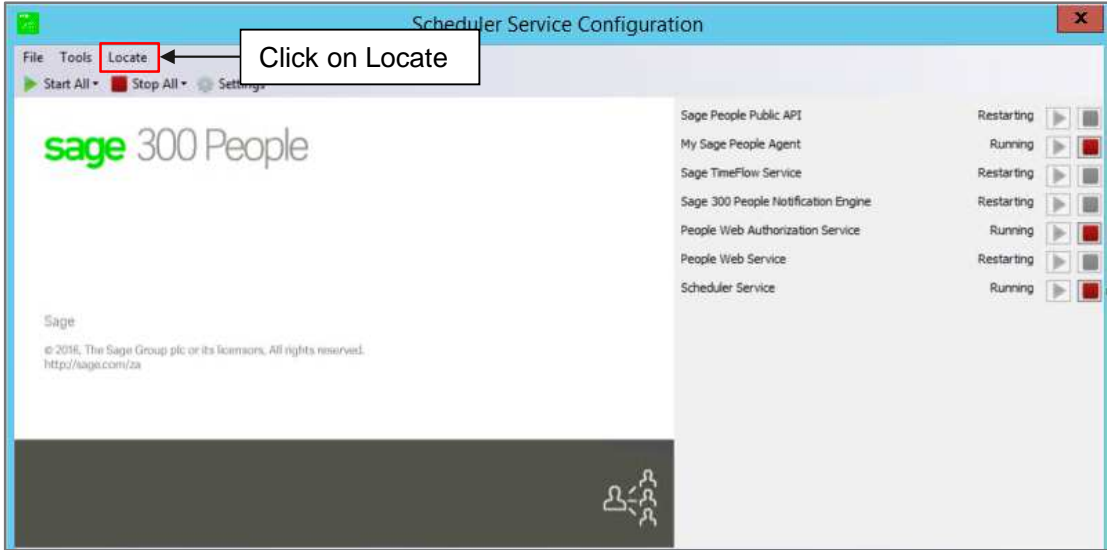

When there is no profile to select from the dropdown when trying to log into Web SS, you will need to relocate the database in the Scheduler Service. Generally, this would be done by your IT person.

Access the Scheduler. This is usually found on the server in the following location: C:\SageVIP\People\SchedulerService. Please refer to your IT person if you are unable to locate the folder.

Click on the Show Hidden Icons field which is found in your task bar to view the Scheduler Service Configuration screen.

Complete the required fields. Should you not have these details, you would need to refer to your IT person to assist.
