

IRP5 Validation Error:

Code 3817 cannot have a value if code 4472 has no value

Background

Validation error populated when running the IRP5/IT3a report from VIP for the Interim reconciliation / Tax Year End reconciliation.

Code 3817 cannot have a value if code 4472 has no value

IRP5 code 3817 refers to the perk that calculates when an employee has a Pension Fund Company Contribution, IRP5 code 4472. The Pension Fund cannot have a Perk if the Company Contribution amounts are zero. This usually happens when adjustments were made to the Pension fund contributions during the year.

To rectify the error, you can follow the steps below:

- Access the employees History screen.
- Identify the month in which the correction was made – On the HS screen, remove adjustment in the month it was made, exit the HS screen, go back in and recapture the adjustment. It will recalculate the YTD values.
- The perk will now be corrected.

Please note that the system will recalculate the tax in the current period. If payment has already been made to SARS, you will have to restate the EMP201.
