

IRP5 Validation Error

ETI wage code xxxx not on file

Background

Validation error populated when running the IRP5/IT3a report from VIP for the Interim reconciliation / Tax Year End reconciliation.

ETI wage code xxxx not on file

When doing a Test or Live run a validation error will print.

To rectify the error, you can follow the steps below:

- Check the ETI codes (Payroll > Definitions > System Description Codes > ETI Codes. The code mentioned in the error will not exist in the system
- Check the ETI History on the PS screen, to see what codes the employee was linked to. You will notice that the employee was linked to the code, that does not exist on the ETI System Description codes
- The code mentioned in the error message (xxxx in this example) does not exist under the code and must be recreated with the correct rate per month and hour.
- Run the validation again to verify that the error has been resolved
