

### Background

When importing the IRP5 file into e@syFile, the file import fails, and the message is displayed on the Import Payroll File Log

*Alternative Identification Number should have format CCYY/NNNNNN/NN when Alternate Identification Type is 1 - code 3066*

The certificate identified on the line which failed, is for a Personal Services Provider (PSP) company

### Possible Solution:

- When the record is a PSP, the gender is changed to "Company or CC" or "Trust"
- The ID number field will be changed to Company Number, which is the Company Registration number (CK number)
- Ensure the number is completed in the format CCYY/NNNNNN/NN
- Once corrected, export your IRP5 file again and import into e@syFile
