

e@syFile Errors

Certificate Number (Transaction Year) does not match

Background

When importing the file into e@syFile the import will fail and the following message will be on the import payroll log:

Certificate Number (Transaction Year) does not match Employer Transaction Year (code 2030) - code 3010

Possible Solution:

- The error indicates that the record's dates are different from that of the other companies included in the multiple company export
- Check the dates of the company in which the employees are in - we expect the dates of the specific company to be in the previous tax year
- All company dates must be within the same tax year
